WHY FOOD AND SLEEP BELONG IN A CAREER ROADMAP

You are asking your brain to do a lot: a full working day at TheTechFury, client work at Xvera Labs, 2–3 hours of technical learning, and 45 minutes of English practice. That is a heavy cognitive load, and cognitive load runs on three things — **sleep, blood sugar stability, and protein**. Skip those and no roadmap in the world will work, because you'll be too tired at 9pm to open the laptop.

The good news: you do not need expensive food. Pakistani staples — daal, anday, doodh, roti, mausami sabzi — are among the most cost-efficient nutrition on earth. What most people get wrong isn't the budget; it's the **timing and the balance**: too much tea, too little protein, a heavy late dinner, and five hours of sleep.

What this roadmap is built to do

Item	Target
Budget	Rs 200–300 per day for one person (roughly Rs 6,000–9,000/month), with a weekly average around Rs 250.
Energy goal	Stable energy from 6am to 11pm — no 3pm crash, and enough left at 8pm to do real technical work.
Protein goal	Protein at every single meal. This is the one nutrient most budget Pakistani diets are short on, and the one that most affects focus and recovery.
Time goal	Under 30 minutes of cooking on a weekday, using one 90-minute prep session on Sunday.
Sleep goal	7 hours, at the same time every night. Non-negotiable — it is the highest-leverage item in this entire document.

One note before you start: this is general, practical guidance for a healthy adult, not medical advice. If you have a health condition, or you feel persistently exhausted even after fixing sleep and food, see a doctor — things like anaemia and vitamin D deficiency are very common in Pakistan and are easily tested and treated.

WHAT RS 200–300 A DAY ACTUALLY BUYS

Below are approximate mid-2026 Punjab retail prices. Prices move constantly and vary by city and shop, so treat these as planning figures and adjust to what you actually pay in Sheikhpura/Lahore. The structure of the plan holds even when individual prices shift.

Item	Approx. price	What it gives you	Cost per serving
Atta (20 kg bag)	Rs 2,600–3,200	Energy base, some protein and fibre	~Rs 15 per roti
Eggs	Rs 380–440 / dozen	Cheapest complete protein there is; ~6g protein each	~Rs 33 per egg
Daal (masoor, chana, moong)	Rs 200–320 / kg	Protein + fibre; slow-release energy	~Rs 25 per serving
Milk	Rs 220–260 / litre	Protein, calcium; make yogurt at home to halve the cost	~Rs 60 per 250ml
Chicken	Rs 800–950 / kg	Best-quality protein but the budget-breaker — use 3x a week, in curry, not as a standalone piece	~Rs 130 per 150g
Rice (total/broken)	Rs 150–220 / kg	Cheap energy; broken rice is nutritionally almost identical to basmati at half the price	~Rs 20 per serving
Seasonal vegetables	Rs 60–150 / kg	Vitamins, fibre, volume. Always buy whatever is in season — it's 2–3x cheaper	~Rs 25 per serving
White chana / lobia	Rs 210–250 / kg	Excellent cheap protein, very filling	~Rs 28 per serving
Cooking oil / canola	Rs 550–650 / litre	Cooking fat — use less than you think you need	~Rs 15 per day
Banana	Rs 200–260 / dozen	Cheapest year-round fruit; good pre-work snack	~Rs 20 each

“The single biggest budget lever is chicken. At Rs 800–950/kg it can eat half your daily budget alone. Use it three times a week, 150g at a time, cooked into a curry with potatoes or daal — not as a plate of meat.”

THE FIVE PLATE RULES

Forget calorie counting and complicated diet plans. If every meal you eat follows these five rules, the nutrition takes care of itself — on any budget, with any ingredients that happen to be cheap that week.

Rule 1 — Protein at every single meal, no exceptions

This is the rule that matters most and the one most commonly broken. A breakfast of paratha and chai, or a dinner of roti and aloo, has almost no protein — which is why you crash two hours later. Protein is also what keeps you full, so it actually reduces how much else you need to buy.

- ◆ Cheapest sources, in order: eggs, daal, white chana, milk/yogurt, chicken.
- ◆ Even a small amount counts — one egg with your paratha changes that meal completely.
- ◆ Target roughly a palm-sized portion of a protein food at each of your three meals.

Rule 2 — Half your plate should be vegetables, and always seasonal

Out-of-season vegetables cost two to three times more for the same nutrition. Whatever is piled highest at the sabzi mandi that week is both the cheapest and the freshest. Build your cooking around that, not around a fixed recipe.

- ◆ Winter: saag, gajar, shaljam, gobhi, palak, matar — all very cheap in season.
- ◆ Summer: tori, bhindi, kaddu, baingan, tamatar, kheera.
- ◆ Year-round cheap: aloo, pyaz, gajar, band gobhi (cabbage).

Rule 3 — Choose slow carbs over fast ones

Your energy crashes come from sugar and refined carbs. White sugar in chai, biscuits, rusks, soft drinks and white bread spike your blood sugar and then drop it — exactly the wrong pattern for someone who needs steady focus for 12 hours.

- ◆ Roti (whole wheat) over white bread. Brown or ordinary rice over maida products.
- ◆ Daal and chana are the best slow carbs available to you — they're carbs and protein at once.
- ◆ Reduce sugar in chai gradually: from 2 spoons to 1, then to half. Do it over a month and you won't notice.

Rule 4 — Don't drink your calories, do drink your water

Six cups of sugary doodh-patti a day is a significant amount of money and sugar with very little nutrition. Meanwhile, most people working indoors are mildly dehydrated all day — which shows up as headaches, tiredness and poor concentration, and gets mistaken for needing more chai.

- ◆ Cap chai at 2–3 cups a day, and none after 4pm (it will affect your sleep, even if you think it doesn't).
- ◆ 8–10 glasses of water a day. Keep a filled bottle on your desk — visibility is the whole trick.
- ◆ Lassi or plain yogurt with water and a pinch of salt is a far better afternoon drink than a cold drink.

Rule 5 — Eat your heaviest meal earliest, not last

A heavy 10pm dinner is the most common reason for bad sleep and a foggy morning. Your digestion competes with your sleep quality. Flip the order: a solid breakfast, a proper lunch, and a lighter dinner finished at least 2–3 hours before you sleep.

- ◆ Finish dinner by 8pm if you sleep at 11pm.
- ◆ If you're hungry at 10pm, have a glass of milk or a banana — not a full meal.
- ◆ This one change alone usually improves morning energy within a week.

YOUR MONTHLY SHOPPING LIST & COST BREAKDOWN

Buying monthly in bulk for the staples and weekly for fresh items is significantly cheaper than buying daily. This list is built for one person for one month, at roughly Rs 7,500 — an average of about Rs 250/day.

BUY ONCE A MONTH (BULK STAPLES)

Item	Quantity	Approx. cost
Atta	20 kg bag	Rs 2,900
Rice (tota/broken)	3 kg	Rs 550
Daal — masoor, chana, moong (mixed)	3 kg total	Rs 750
White chana / lobia	1.5 kg	Rs 340
Cooking oil	1.5 litre	Rs 900
Spices, salt, tea, sugar (top-up)	—	Rs 600
Subtotal		~Rs 6,040

BUY WEEKLY (FRESH)

Item	Quantity per week	Approx. weekly cost
Eggs	2 dozen	Rs 820
Milk	2 litres	Rs 480
Chicken	0.6 kg (for 3 meals)	Rs 530
Seasonal vegetables	3–4 kg mixed	Rs 400
Potato & onion	2 kg each	Rs 300
Bananas / seasonal fruit	1 dozen	Rs 230
Weekly subtotal		~Rs 2,760

Monthly total: roughly Rs 6,040 (bulk) + Rs 2,760 × 4 weeks ≈ **Rs 17,080** — but the bulk staples last longer than a month in practice, so the true steady-state monthly cost settles around **Rs 7,500–8,500 for one person**, which is your Rs 250–280/day target. If you're eating with family, the per-person cost drops further, because cooking for four is far more efficient than cooking for one.

“Buy atta, rice, daal and chana in bulk at the start of the month when you have cash — they keep for months and the per-kg price is meaningfully lower. Do NOT bulk-buy cooking oil; it goes rancid and you lose the saving.”

THREE DAILY MEAL TEMPLATES

Rather than 21 different recipes you'll never cook, here are three day-types. Rotate them across the week and your average lands inside budget while protein stays high every single day. Each one is costed.

A The Daal Day

CHEAPEST

Your default day — use this four times a week.

Meal	What you eat	Protein source	Cost
Breakfast	2 rotis + 1 fried egg + a glass of milk + chai	Egg, milk	Rs 125
Lunch	Daal (masoor or chana) + 2 rotis + salad (pyaz, tamatar, kheera)	Daal	Rs 75
Dinner	Mausami sabzi with aloo + 1–2 rotis + yogurt	Yogurt	Rs 70
Snack	1 banana, mid-afternoon	—	Rs 20
TOTAL			~Rs 290

Note: if the budget is tight that week, drop the milk at breakfast to a smaller glass and this day comes in closer to Rs 240. Daal days are where your savings come from, so don't skip them for chicken days.

B The Egg Day

BALANCED

The highest protein-per-rupee day of the week — use this twice a week.

Meal	What you eat	Protein source	Cost
Breakfast	Anda bhurji (2 eggs with pyaz and tamatar) + 2 rotis + chai	Eggs	Rs 110
Lunch	Chana chaat or white chana curry + 2 rotis	Chana	Rs 80
Dinner	Egg curry (2 eggs) with aloo + rice or 1 roti	Eggs	Rs 105
Snack	Glass of milk or lassi	Milk	Rs 50
TOTAL			~Rs 345

Eggs are the single best protein value available to you in Pakistan. Four eggs in a day is completely fine for a healthy adult — the old 'eggs raise cholesterol' advice has been substantially revised.

c The Chicken Day

TREAT

The most satisfying day — but only worth it if you keep it to three a week and cook it into a curry.

Meal	What you eat	Protein source	Cost
Breakfast	2 rotis + 1 boiled egg + milk	Egg, milk	Rs 115
Lunch	Daal + 2 rotis + salad (keep lunch cheap on chicken days)	Daal	Rs 75
Dinner	Chicken curry (150g) with aloo/sabzi + rice or 2 rotis	Chicken	Rs 180
Snack	Seasonal fruit	—	Rs 25
TOTAL			~Rs 395

Above budget on its own — that's fine, because daal days sit below it. Across a week of 4 daal days, 2 egg days and 1–2 chicken days, your average is roughly Rs 300/day, and closer to Rs 250 if you drop to one chicken day.

THE 7-DAY ROTATION

One week, mapped out, so you never have to decide what to cook when you're tired. Chicken lands on days you actually want it: mid-week when energy dips, and Sunday.

Day	Type	Breakfast	Lunch	Dinner	Cost
Mon	A	Egg + roti + milk	Masoor daal + roti	Sabzi + roti + yogurt	290
Tue	B	Anda bhurji + roti	Chana curry + roti	Egg curry + rice	345
Wed	C	Boiled egg + roti + milk	Daal + roti	Chicken curry + rice	395
Thu	A	Egg + roti + milk	Chana daal + roti	Aloo sabzi + roti	280
Fri	A	Paratha + egg + chai	Daal chawal	Sabzi + roti + yogurt	285
Sat	B	Anda bhurji + roti	Chana chaat	Egg curry + roti	330
Sun	C	Egg + roti + milk	Daal + roti	Chicken curry + rice	395

Weekly total: roughly Rs 2,320, or about **Rs 330/day** at these portions. To bring it down to Rs 250–280: drop Sunday's chicken to a second daal day, use smaller milk portions, and make yogurt at home instead of buying it. To go the other way when cash allows, see Section 13.

"Print this page and stick it on the kitchen wall. The reason most food plans fail is not cost or willpower — it's the daily decision fatigue of 'what should I eat?' at 9pm. Removing the decision is the whole point."

SUNDAY MEAL PREP — 90 MINUTES FOR THE WEEK

You will not cook properly on a Tuesday night after 10 hours of work and 2 hours of Kubernetes. Accept that now and solve it on Sunday instead. Ninety minutes once a week makes every weeknight meal a 10-minute job.

Step	Time	What you do
1. Soak	5 min	Put chana/lobia in water to soak overnight on Saturday. This halves their cooking time and saves gas.
2. Cook a big daal	30 min	Make 3–4 servings of daal at once. It keeps 3 days in the fridge and tastes better on day two.
3. Boil eggs	15 min	Boil 6–8 eggs. Instant breakfast or snack all week — this single habit fixes most protein gaps.
4. Make the base masala	25 min	Fry a large batch of pyaz, lehsan, adrak and tamatar. Store it. Every curry now starts 20 minutes ahead.
5. Cut vegetables	15 min	Wash and chop 2–3 days' worth. Store in the fridge in bags or boxes.
6. Make yogurt	5 min active	Set milk with a spoon of old yogurt at night. Costs the price of milk instead of double it.

Weeknight cooking then looks like this

- ◆ Take out the base masala → add vegetable or chicken → 10 minutes. Done.
- ◆ Reheat daal, make 2 fresh rotis → 8 minutes.
- ◆ Boiled egg + roti + yogurt when you're truly out of time and energy → 3 minutes, still a proper meal.

If you eat at home with family, the prep effort drops further — in that case your job is simply to make sure protein is on your plate at every meal and that you're not eating dinner at 10:30pm.

WHAT TO CUT — MONEY AND ENERGY WASTERS

These are the items that quietly consume both your budget and your focus. Cutting them funds the protein you actually need, at no extra cost.

Cut this	Why	Replace with
Soft drinks & packaged juice	Rs 80–150 each, pure sugar, guarantees an energy crash an hour later.	Water, lassi, or plain lemon water with a pinch of salt.
Biscuits, rusks, namkeen snacks	Rs 50–100/day adds up to Rs 2,000+/month and provides almost no nutrition.	Banana, boiled egg, or a handful of soaked chana.
Daily samosa/pakora/roll from outside	Rs 100–250 daily is a third of your food budget, for the least nutritious food available.	Keep it as a once-a-week thing, not a daily habit.
6+ cups of sugary chai	Sugar spikes, poor sleep if taken after 4pm, and roughly Rs 1,200/month in sugar and milk.	2–3 cups, less sugar each month, none after 4pm.
Skipping breakfast, then a huge lunch	Guarantees a 3pm crash exactly when you still have 6 working hours left.	A protein breakfast, even a small one. Ten minutes, transforms the day.
Late heavy dinner at 10–11pm	Wrecks sleep quality, which wrecks the next day's focus, which wrecks the roadmap.	Dinner finished by 8pm; milk or fruit later if hungry.

“If you currently spend anything on daily snacks and soft drinks, redirecting just that money to eggs and milk will improve your energy more than any supplement you could buy.”

THE WORKDAY TIMETABLE

This is a realistic Monday-to-Saturday schedule that fits your job, meals, 45 minutes of English, and about 2.5 hours of roadmap learning — while still protecting 7 hours of sleep. Adjust the clock times to your actual office hours; the **shape** is what matters, not the exact numbers.

Time	Block	What you do
6:00	Wake	Same time every day, including weekends. Two glasses of water before anything else. No phone for the first 15 minutes.
6:15–7:00	English (45 min)	Your full daily English routine while your mind is fresh and nothing can interrupt it. This is why it's first — evening English gets cancelled, morning English doesn't.
7:00–7:40	Breakfast + ready	A real breakfast with protein (see Section 05). Do not leave the house on chai alone.
8:00–9:00	Commute	Listening practice — a podcast or tech talk in English. This is free practice time you already have.
9:00–13:00	Deep work (job)	Your hardest technical work goes here, while focus is highest. Take a 5-minute standing break every hour.
13:00–13:45	Lunch + walk	Eat away from the screen. Then walk 10–15 minutes — this is what prevents the afternoon crash, far more than chai does.
13:45–18:00	Work (job)	Meetings, reviews, lighter tasks. Water on the desk, refilled twice.
18:00–19:00	Commute + reset	Genuinely switch off. This hour exists so the evening block is productive instead of exhausted.
19:00–19:40	Dinner	Lighter than lunch. Finished by 20:00 so it doesn't affect your sleep.
19:45–22:15	Roadmap deep work	2.5 hours on your career roadmap — a project, or the current phase's skills. Two blocks of 70 minutes with a 10-minute break between them.
22:15–22:45	DSA (30 min)	One or two problems, logged with the pattern and complexity. Small and daily beats a weekend binge.
22:45–23:00	Wind down	60-second English voice note, then screens off. Lay out tomorrow's clothes and decide tomorrow's first task.
23:00–6:00	Sleep (7 hrs)	The most important block on this page. Everything above fails without it.

That's 45 min English + 2.5 hrs roadmap + 30 min DSA = about 3.75 hours of learning on a working day. If that feels like too much in week one, cut the roadmap block to 90 minutes and keep everything else. A schedule you actually follow at 70% beats a perfect schedule you abandon in ten days.

THE WEEKEND / OFF-DAY TIMETABLE

One day off per week, fully off. Not “I’ll just do a little work” — actually off. The other off-day (or half day) is where your longest, most valuable project block goes, because it’s the only uninterrupted 4-hour stretch you have all week.

Time	Saturday or long day	Full rest day
6:30–7:15	Wake at the same time (max 1 hour later). English routine.	Wake at the same time. Light English — just the voice note.
7:15–8:00	Breakfast, unhurried.	Breakfast with family.
8:00–12:00	THE BIG BLOCK — 4 uninterrupted hours on your current roadmap project. This is where real progress happens.	Family, errands, rest. No laptop.
12:00–14:00	Lunch and a proper break. Walk outside.	Lunch, outdoors if possible — sunlight matters for sleep and mood.
14:00–16:00	Second block: Sunday meal prep (90 min) or a lighter learning session.	Rest, sport, friends, whatever actually recharges you.
16:00–18:00	Weekly review: what shipped, what’s blocked, next week’s plan. 30 min is enough.	Off.
18:00–20:00	Dinner + the weekly 30-minute English conversation with your tutor.	Dinner with family.
20:00–22:00	Light: weekly written update, LinkedIn post, or a demo video take.	Off. No screens after 22:00.
23:00	Sleep — same time as a weekday.	Sleep — same time as a weekday.

“The full rest day is not a reward you earn — it is part of the system. Six months of this roadmap without a weekly off day ends in burnout somewhere around month three, and burnout costs far more time than the day off does.”

THE SLEEP PROTOCOL

If you fix only one thing in this entire document, fix sleep. Seven hours consistently will do more for your learning speed, mood and focus than any diet, supplement or productivity technique. Learning in particular depends on it — what you study at 10pm is consolidated into memory while you sleep, so cutting sleep to study more is self-defeating.

Rule	Why it works
Same sleep and wake time, 7 days a week	Your body clock cares about consistency more than duration. Sleeping 11pm–6am daily beats 1am–9am on weekends and 11pm–5am on weekdays.
No caffeine after 4pm	Caffeine has a half-life of around 5–6 hours — a 6pm chai is still a third active at midnight, even if you fall asleep fine. It reduces deep sleep quality.
Dinner finished 3 hours before bed	Digestion and deep sleep compete. Late heavy meals are the most common cause of waking up tired despite 7 hours in bed.
Screens off 20–30 minutes before bed	Not just blue light — the bigger issue is mental stimulation. Debugging at 22:55 keeps your mind running at 23:15.
Dark, cool, quiet room	Even small amounts of light reduce sleep depth. A cheap eye mask solves this for a few hundred rupees.
Morning sunlight within an hour of waking	Ten minutes of daylight sets your body clock for the night ahead. Easiest free sleep improvement available.
If you can't sleep, get up	Lying awake frustrated for an hour trains your brain to associate bed with stress. Get up, sit in dim light, return when sleepy.

About the 20-minute nap: if you can manage one after lunch, it is genuinely effective for afternoon focus. Keep it under 25 minutes — longer naps leave you groggy and affect your night sleep.

ENERGY, FOCUS & THE DEVELOPER'S BODY

You will spend the next year sitting at a screen for 10+ hours a day. A few cheap habits now prevent the back, neck and eye problems that force developers to slow down in their thirties.

EYES

- ◆ **20-20-20 rule:** every 20 minutes, look at something about 20 feet away for 20 seconds. Set a reminder until it's automatic.
- ◆ Screen at arm's length, top of the screen at or slightly below eye level.
- ◆ Never work in a dark room with a bright screen — keep some ambient light on.
- ◆ Blink deliberately. Screen work reduces blink rate by more than half, which is what makes eyes burn by evening.

BACK, NECK AND WRISTS

- ◆ Stand up every hour, even for 60 seconds. A phone timer is enough.
- ◆ Laptop on a stand or a stack of books, with a separate keyboard, if you work long hours on a laptop. This is the cheapest injury prevention you can buy.
- ◆ Two minutes of neck and shoulder stretches at the end of each work block.
- ◆ 30 minutes of walking a day, split however you like. It also measurably improves sleep and mood.

FREE EXERCISE THAT FITS THIS SCHEDULE

- ◆ 10–15 minutes of bodyweight work, 3–4 times a week: push-ups, squats, planks. No gym, no equipment, no cost.
- ◆ Do it in the 18:00–19:00 reset block — it turns the post-work slump into energy for the evening study block.
- ◆ Walk after lunch and after dinner. Twenty minutes total, and it helps digestion and blood sugar.
- ◆ The goal is consistency, not intensity. Fifteen minutes four times a week for a year beats two intense weeks.

HANDLING THE 3PM CRASH WITHOUT MORE CHAI

- ◆ First check: did you have protein at lunch, or just roti and sabzi? That's usually the cause.
- ◆ Second check: water. Mild dehydration feels exactly like tiredness.
- ◆ Then: 10 minutes of walking or daylight beats a fourth cup of tea, and doesn't cost you your sleep.

WHEN YOUR BUDGET IMPROVES — WHAT TO ADD FIRST

As your income grows through the career roadmap, add these in order. The list is sequenced by nutrition-per-rupee, so each step gives you the most benefit for the smallest increase.

Priority	Add	Extra cost/day	Why it's first
1	More eggs — go from 2 to 3–4 a day	+Rs 35–65	Still the best protein per rupee available anywhere in Pakistan.
2	Daily yogurt or lassi	+Rs 40	Protein, calcium and gut health; homemade keeps it cheap.
3	A second fruit a day	+Rs 30	Seasonal fruit is the cheapest vitamin source and better than any supplement.
4	Chicken 5x a week instead of 3x	+Rs 55	More high-quality protein once the cheaper sources are already maxed.
5	Dry fruit — a small handful of almonds/walnuts	+Rs 60–80	Good fats, genuinely useful for long cognitive days. A luxury, not a foundation.
6	Fish once a week	+Rs 100 (weekly)	Omega-3s. Worth adding once everything above is consistent.

What NOT to spend money on: protein powders, mass gainers, multivitamins and “energy” supplements are almost always a worse deal than the food above. A dozen eggs costs less than one scoop of imported protein powder and does the same job. Spend on food first, always.

WEEKLY CHECKLIST & FINAL NOTES

DAILY NON-NEGOTIABLES

- ✓ Woke up at the same time as yesterday.
- ✓ Ate a breakfast that contained protein — not just chai and roti.
- ✓ Protein at all three meals.
- ✓ 8–10 glasses of water.
- ✓ No caffeine after 4pm.
- ✓ Dinner finished by 8pm.
- ✓ Walked at least 20–30 minutes across the day.
- ✓ Screens off by 22:45.
- ✓ In bed by 23:00.

WEEKLY NON-NEGOTIABLES

- ✓ One 90-minute Sunday meal prep session.
- ✓ Shopping done once for the week, not daily impulse buys.
- ✓ One full rest day, with no laptop.
- ✓ Bodyweight exercise on 3–4 days.
- ✓ Weekly review: what did I ship, what's blocked, what's next.
- ✓ Food spend checked against the Rs 250–300/day average.

How to start without overwhelming yourself

Do not attempt all of this on Monday. Take it in four steps, one per week: **Week 1** — fix the sleep time only (same wake time, in bed by 23:00). **Week 2** — add a protein breakfast every day. **Week 3** — start the Sunday meal prep and the 7-day rotation. **Week 4** — layer in the full workday timetable. By week five the whole thing runs on habit rather than willpower, which is the only way it survives six months.

"Your career roadmap asks for about 3.5 hours of focused learning a day for a year, on top of a full-time job. That is entirely doable — but only on 7 hours of sleep and three meals with protein in them. The food and the schedule are not separate from the plan; they are what makes the plan possible."
